I installed Joomla successfully on my site with the help of your video! New to both Joomla and my current host, I had problems installing the awesome CMS! Thankfully, all the problems have been sorted and I can't be happier! Now, I am sure your video tutorials will help me overcome any problems as regards modules, installation of plugins and templates and other complexities! Thanks a million for the help! I plan to launch my website next week! 😊

I will do my best to promote this site so that other noobs like me can benefit from this.

Cheers! Keep rocking!

Hi There,

Thanks for the great bunch of tutorials, and the really great price! Awesome.

I've been struggling with Joomla for a while. I see the advantages, but also the maze of code that surrounds it, which is hard to modify...

your tutorials are well made, and helpful.

Question I have is: is it possible to resize the video? Sometimes I have difficulties to see what item you're at in the menu, so I have to go back and watch a part again getting quite close to the screen.

I tried to be smart and made size changes in the xml file, but the result is that the video screen does resize, but a part of the video can't be viewed, probably because of the "swf size" that holds it? Im guessing here, I don't have flash/swf experience.

Anyway, a somewhat larger video-size would be tops!

thanks again, great product.

Hi,

Sorry for my somewhat late response. My new videos will certainly have the full screen option in it again.

For now, please view the attached screenshots (click to enlarge) on how to see current videos in a bigger size.

Best option would be to use the Free VLC Media Player, which can play FLV files: <http://www.video-player-get.info/video-player-get/>

Hi Piet,

Thanks for the tip. I've been using VLC player for a while now, BUT... my .flv files are - by default - still opened by another player...

So, by resizing your tutorials, the video-images got really fuzzy, so that's why I asked for your

assistance.

I had NO idea (at all..), that VLC did such a great job and that by resizing, the quality of the movies isn't effected. Wonderful!

Sher

this was an aowsome offer.....

downloading it now and hoping that it will be enough to learn the basics of joomla!!!

Hi,

What would you like to see? How you can use Joomla with tools like XAMP and MAMP?

In essence the installation and usage of Joomla itself would be no different.

Can you elaborate on what you exactly would like to see?

We will be producing new videos this year in a different business model. We would like to receive every input possible.

Actually i'm totally new in web designing. ☺

but i'm trying as much as i can. i found some templates to work with and tried to install them.after installing the look has changed from what i saw in the demo.

the problems:

1.the top menu went further top then where it was in the demo.

2.in demo three separate columns where shown but i'm seeing only two,the poll and advertisement fields are gone!!

the problem is i'm not getting the point on how to do what....

can u plz help me.

Hi,

You will need to provide screenshots

You can use the img tags where you can place your pictures in this way:

[img]http://www.urltoyouronlineimage.com/image.png[/img]

This is where you could use an online service like <http://www.techsmith.com/jing/>

(Or you can upload attachments in the forum - under the "save - preview - submit" buttons you have an Options and Upload attachment tab.).

I need to have visual of what you are trying to accomplish.

By the sounds of it, you are facing some module position difficulties.
